

Donastar Triple-Stage Fountain Beverage and Ice System

Elevate your beverage experience

Donastar's system offers three stages of filtration to ensure the highest quality water for your fountain beverages and ice. It effectively reduces chlorine, taste, odor, scale, cysts, sediment, and Class 1 particulates.⁽¹⁾

Use of our Triple-Stage System results in cleaner and better-tasting fountain beverages and ice, with the added benefit of equipment optimization and extended performance life.

- **Tested Functionality:** With the Donastar Triple-Stage System, you are employing two high-performance scale and chlorine, taste, and odor (CTO) filters which have been rigorously tested NSF/ANSI 42 and 53 standards.
- **High Capacity:** Designed to handle your restaurant's demands, our system boasts an impressive 22,000-gallon capacity. It provides a reliable and continuous supply of filtered water, even during peak hours, allowing you to serve more customers without interruption.
- **Unmatched Performance:** With a flow rate of 2 gallons per minute, our system delivers water quickly and efficiently. You can count on consistent water flow, ensuring smooth operation and reducing customer wait times.
- **Tailored for Your Needs:** The Donastar Triple-Stage System is perfect for fountain beverage and ice combination dispensers as well as frozen drink dispensers. Whether you're serving refreshing fountain sodas, ice-cold beverages, or frozen treats, our system is designed to meet the unique demands of your establishment.
- **Easy Installation:** We understand the importance of minimizing downtime in a busy restaurant environment. Our system is designed for quick and hassle-free installation, ensuring a seamless transition without disrupting your operations.
- **Environmental Sustainability:** Unlike systems that rely on polyphosphates, our filtration system is environmentally friendly. By choosing our system, you actively contribute to reducing the risks of environmental impact associated with polyphosphates.

(1) Particles 0.5 to 1 micron in size.
